NEW HOLLAND

## COMBINE POLY-HEADER TRANSPORTER

Especially adapted and designed for NEWHOLLAND combine header.

- The NEWHOLLAND combine header with or without the Cheval header extension is seating perfectly well onto the Cheval poly-header transporter.
- The Cheval poly-header transporters are designed to provide safe and secure handling of even the largest headers.
- Particular attention has been given to rapid and easy loading and retrieval of the header by reducing the need for accurate alignment through perfect vision from the combine cabin using the patented fast lock system.

*Patented fast lock system.*

Cheval poly-header transporters are designed to withstand the requirements of contractors, large acreage farmers and those land layout necessitates a high mileage for harvesting equipment.

It is possible to carry the cheval header extension alone onto the Cheval poly-header transporter when fitting the special collection kit including clamps and wooden platform.

Safely fitted onto it, farmers and contractors can switch from OSR to wheat very rapidly during the harvest season.

Fast lock system, the only piece to be fixed onto the trolley when first arrived in the yard.

Guided ramp.

Centring pointer.

- To get out of the field, the combine driver will go forward once the poly header transporter is attached to combine. No more reverse. Safety is improved.
- It is easy to move around and to do a U turn.
- The poly-header transporter is following perfectly well the combine.

The driver will then go forward and the poly-header transporter will follow the combine.

To attach poly-header transporter without reversing, the combine driver has to park the combine harvester in double line next to the trolley in parallel position.

#### STANDARD FEATURES
